| | Parameter | Description | Value | | | |
|--|-----------|--------------|------------------------------|--|---|--|
| | | | Required | Recommended for Non-Alternative Sleep Mode1 | Recommended for Alternative Sleep Mode | |
| | Т3 | PWR_OK delay | 100 ² - 500 ms | 100ms² - 250 ms | 100ms² - 150ms | |

- 2. T3 minimum must not be faster than 100ms. All design tolerances must be considered to avoid T3 faster than 100ms.
 - a. A T3 time less than 100ms may be designed based on system requirements and a need to provide faster PSU and system turn on capability. However, PSU and system designers are highly recommended to verify and ensure no PSU and system compatibility problems exist, especially for previous generation motherboards and systems.
